Day-10

PROJECT: CONSOLE-BASED TO-DO LIST MANAGER IN PYTHON

Instructor

Abdullah Al Zubaer

Instructor – Artificial Intelligence & Data Science

B.Sc. in Internet of Things and Robotics Engineering

Gazipur Digital University, Gazipur, Bangladesh

Table Of Content

Setup and Initialize

Show Menu and Get User Choice

Add a Task

View or Remove Tasks

Exit or Handle Invalid Input

Setup and Initialize

```
print("Welcome to the To-Do List Manager!")
todo_list = []
```

Show Menu and Get User Choice

```
while True:
    print("\nMenu:")
    print("1. Add a task")
    print("2. View all tasks")
    print("3. Remove a task")
    print("4. Exit")

choice = input("Enter your choice (1-4): ")
```

Add a Task

```
if choice == '1':
task = input("Enter the task you want to add: ")
todo_list.append(task)
    print(f"Task '{task}' added.")
```

View Tasks

```
elif choice == '2':
    if len(todo_list) == 0:
print("Your to-do list is empty.")
    else:
print("Your tasks:")
for index, task in enumerate(todo_list, start=1):
print(f"{index}. {task}")
```

Remove Tasks

```
elif choice == '3':
    if len(todo_list) == 0:
        print("Your to-do list is empty. Nothing to remove.")
    else:
        print("Which task number do you want to remove?")
        for index, task in enumerate(todo_list, start=1):
            print(f"{index}. {task}")

        task_num = input("Enter task number to remove: ")
```

Validate User Input and Remove Task

```
if task_num.isdigit():
            task_num = int(task_num)
            if 1 <= task_num <= len(todo_list):
                removed_task = todo_list.pop(task_num - 1)
                print(f"Task '{removed_task}' removed.")
            else:
                print("Invalid task number.")
        else:
            print("Please enter a valid number.")
```

Exit or Handle Invalid Input

```
elif choice == '4':
    print("Exiting To-Do List Manager. Goodbye!")
    break

else:
    print("Invalid choice. Please enter a number between 1 and 4.")
```

QUESTION SESSION

THANK YOU
