PYTHON PROGRAMMING

21 Days Challenge

Day-08

Day-08

DECISION MAKING - IF-ELSE STATEMENTS, ELIF STATEMENTS, AND CONDITIONS

Instructor

Abdullah Al Zubaer

Instructor – Artificial Intelligence & Data Science

B.Sc. in Internet of Things and Robotics Engineering

Gazipur Digital University, Gazipur, Bangladesh

Table Of Content

- Decision Making
- Python If Statement
- Python If-Else Statement
- Python If-Elif-Else Statement
- Nested If..Else Conditional Statements
- Ternary Conditional Statement
- Match-Case Statement in Python

Decision Making

- Decision Making: Lets the program choose actions based on conditions (if, elif, else).

Importance:

- Logic implementation
- Efficiency
- Interactivity
- Reusability

Python If Statement

if expression:

  # statement(s) to be executed

```
temperature = 30

if temperature > 25:
    print("It's a hot day!")
```

Output

```
It's a hot day!
```

Python if else Statement

```
temperature = 24

if temperature > 25:

    print("It's a hot day!")

else:
    print("It's a cool day!")
```

Output

```
It's a cool day!"
```

Python if elif else Statement

```
temperature = 26

if temperature > 30:
    print("It's a very hot day!")

elif temperature > 20:
    print("It's a warm day!")

else:
    print("It's a cool day!")
```

Output

```
It's a warm day!
```

Nested if.else Conditional Statements

```
temperature = 28
humidity = 70

if temperature > 25:
    if humidity > 60:
        print("Hot and humid!")
    else:
        print("Hot but not humid.")
else:
    print("Cool weather.")
```

Output

```
Hot and humid!
```

Ternary Conditional Statement

```
temperature = 28

message = "Hot day" if temperature > 25 else "Cool day"
print(message)
```

Output

```
Hot day
```

Match-Case Statement in Python

```
day = 3
match day:
    case 1:
        print("Monday")
    case 2:
        print("Tuesday")
    case 3:
        print("Wednesday")
    case _:
        print("Another day")
```

Output

```
Wednesday
```

QUESTION SESSION
